

HOW TO SAVE ENOUGH ENERGY TO POWER A CITY FOR A YEAR

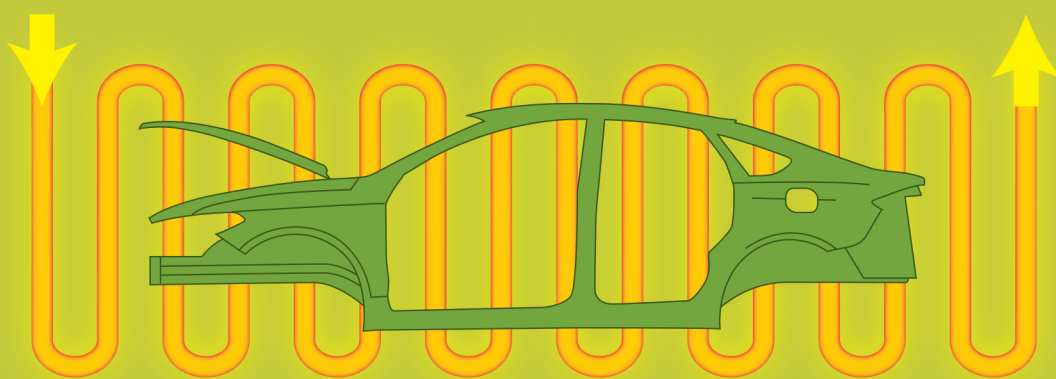

Ford in Europe is on course to achieve a reduction in energy usage of **25%** from 2011 to 2016 per vehicle produced, following investments of **€23m**

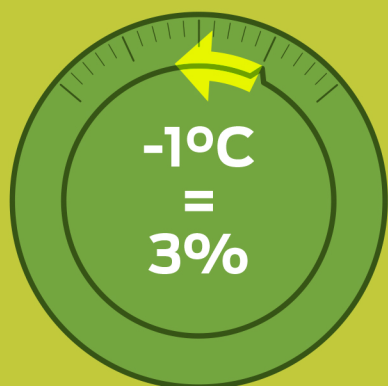

23m

We've changed the way paint dries by recovering heat from our factory paint ovens

We all know changing light bulbs saves energy. We installed **25,000** new low-energy LED fixtures at facilities around the world last year

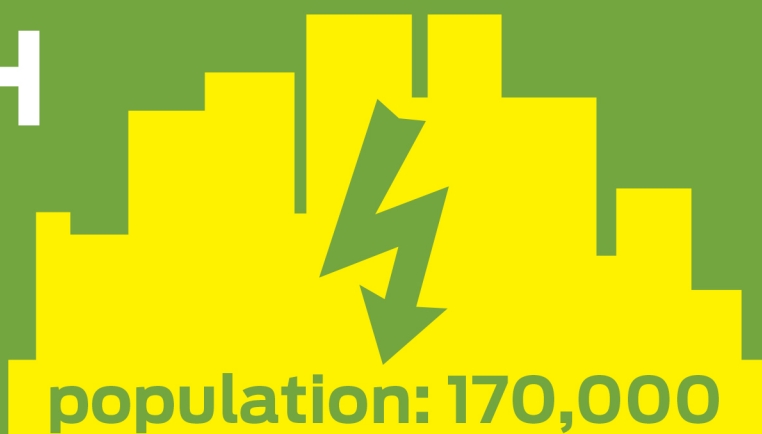

You can cut your heating bill by **3%** just by turning your heating down by 1 degree C.

Our energy team remotely controls plant heating systems to save energy in areas not in use

-800 GWH

Each year we save about **800 gigawatt hours** of energy – enough to power a city with a population of 170,000
